WolfRepair System Test Plan

Document Author: Aanya Tomar
Date: 09/24/2026

Introduction

Open Eclipse with Java 21 configured. If Project1 is not already in the workspace, select File → Import → General → Existing Projects into Workspace → Next. Browse to the submitted Project1 folder, select the project, and click Finish.
Open Window → Show View → Package Explorer. Expand Project1 → src → edu.ncsu.csc216.wolf_repair.view.ui.
Right-click WolfRepairGUI.java → Run As → Java Application. Confirm that the Wolf Repair window opens.
Run each test independently in a fresh application instance. After completing a test, close the application using its window close button. If a save chooser appears, cancel it. Confirm the application closes, then repeat step 3 before starting the next test.
Before Test 5, confirm that Project1/test-files/wolfrepair_stp_input.txt contains the exact contents in the Test Files section. Preserve this input file unchanged.
During Test 5, save to Project1/test-files/wolfrepair_stp_output.txt. Remove any previous output file before repeating the test. To inspect the saved file, refresh Project1 in Eclipse, then right-click the output file and select Open With → Text Editor.
Compare each observed result with its expected result. Record the observations in Actual Results and mark each test PASS or FAIL, describing any differences.

Test Files

Input file: wolfrepair_stp_input.txt (used only by STP-5). Enter each line exactly, including the empty fields represented by consecutive commas:

```
# Bragaw Hall,Dorm,15000
* 5,InProgress,Devon Brooks,HVAC unit not cooling,jmartin,
* 1,Submitted,Alice Chen,Leaking faucet in room 214,,
* 3,Assigned,Priya Nair,No hot water on 3rd floor,,
* 1,UnderReview,Jamie Fox,Duplicate id for testing,,
* 4,InProgress,Ravi Shah,Broken door closer,,
# Reynolds Coliseum,Athletic,40000
```

* 2,UnderReview,Marcus Lee,Bleacher railing loose,,
Empty Site,Dorm,100
* 4,Completed,Sam Patel,Broken window,,Fixed.

In Bragaw Hall, the second ID 1 is a duplicate and ID 4 has no technician despite being InProgress. Empty Site has no valid work orders. These records test the file-loading rules. STP-5 creates
wolfrepair_stp_output.txt; its expected retained records are stated in that test

Requirements Coverage

Requirement	Test 1	Test 2	Test 3	Test 4	Test 5
UC0: Start WolfRepair	X	X	X	X	X
UC1: Create Repair Site	X	X	X	X	
UC2: Load Repair Sites and Work Orders					X
UC3: Save Repair Sites and Work Orders					X
UC4: Quit WolfRepair					X
UC5: Select Active Repair Site					X
UC6: List Work Orders	X	X			
UC7: Add a Work Order	X	X			
UC8: Delete a Work Order					X

UC9: Edit a Work Order	X	X	X	X	
UC10: Filter Work Orders by State					
UC11: Edit Submitted State	X	X	X	X	
UC12: Edit UnderReview State	X	X	X	X	
UC13: Edit Assigned State	X		X	X	
UC14: Edit InProgress State	X			X	
UC15: Edit Rejected State		X	X	X	
UC16: Edit Completed State	X				

System Tests

Write at least 5 tests. We will grade the first five. Your tests should consider more complex scenarios than basic system startup/shutdown and an invalid test file.

Test ID	Description	Expected Results	Actual Results

Test ID: 1 Test Name: Unique ID: completeAndReopenWorkOrder Requirement(s) UC0, UC1, UC6, UC7, UC9, UC11, UC12, UC13, UC14, UC16 Type: System (manual GUI) Author: Aanya Tomar	Preconditions: Fresh launch; no sites loaded. 1. Create a site with name Hunt Library, category Academic, and budget 50000. 2. Add a work order with requester Morgan Diaz and description Study room door lock jammed. 3. Select the new ID 1 order and click Submit. 4. Edit ID 1; enter review note Safety issue and click Approve. 5. Edit ID 1; enter technician ID twalker and click Dispatch. 6. Edit ID 1; enter status note Replacement lock ordered and click Status Update. 7. Edit ID 1; enter completion note Lock replaced and tested and click Complete. 8. Edit ID 1; enter optional reopen note Lock jammed again and click Reopen.	1. Hunt Library is active and its list is initially empty. 2. ID 1 appears with state Submitted, requester Morgan Diaz, description Study room door lock jammed, and no technician. 3. After Submit, ID 1 is UnderReview. 4. After Approve, ID 1 is Assigned and its review note is Safety issue. 5. After Dispatch, ID 1 is InProgress with technician twalker. 6. After Status Update, ID 1 remains InProgress and its note is Replacement lock ordered. 7. After Complete, ID 1 is Completed with technician twalker and note Lock replaced and tested. 8. After Reopen, ID 1 is InProgress and technician twalker is retained	Pass.

Test ID: 2 Test Name: denyAndReconsider Requirement(s): UC0, UC1, UC6, UC7, UC9, UC11, UC12, UC15	Preconditions: Fresh launch; no sites loaded. 1. Create a site with name Poe Hall, category Academic, and budget 12000. 2. Add requester Jamie Fox with description Replace hallway paint color; verify its ID is 1. 3. Edit ID 1 and click Submit.	1. The added order is ID 1 in Submitted with no technician. 2. Submit changes it to UnderReview. 3. Deny changes it to Rejected with no technician and note	Pass.
Type: System (manual GUI) Author: Aanya Tomar	4. Edit ID 1; choose Invalid/Duplicate/Not Actionable and click Deny. 5. Edit rejected ID 1; enter optional reopen note New information received and click Reopen. 6. Edit ID 1; enter optional review note Approved after review and click Approve.	Invalid/Duplicate/Not Actionable. 4. Reopen changes it to UnderReview with no technician. 5. Approve changes it to Assigned with no technician and note Approved after review	
Test ID: 3 Test Name: rejectAndDispatch Requirement(s): UC0, UC1, UC6, UC7, UC9, UC11, UC12, UC13, UC15 Type: System (manual GUI) Author: Aanya Tomar	Preconditions: Fresh launch; no sites loaded. 1. Create a site with name Carmichael Gymnasium, category Athletic, and budget 18000. 2. Add requester Riley Chen with description Shower is leaking; verify its ID is 1. 3. Edit ID 1 and click Submit; then edit ID 1 and click Approve with the review note left blank. 4. Edit ID 1; leave technician ID blank, choose No technician available, and click Dispatch. 5. Edit rejected ID 1; leave technician ID blank and click Dispatch. 6. In the same edit window, enter technician ID dnguyen and click Dispatch	1. After approval, ID 1 is Assigned and has no technician. 2. The blank-technician dispatch with the selected reason moves ID 1 to Rejected; the note is No technician available and the technician is blank. 3. Dispatch from Rejected without a technician displays Invalid state transition; ID 1 stays Rejected. 4. Dispatch with dnguyen moves ID 1 to	Pass.

		InProgress and records technician dnguyen.	
Test ID: 4 Test Name: reassignAndReopen Requirement(s): UC0, UC1, UC6, UC7, UC9, UC11, UC12, UC13, UC14, UC15 Type: System (manual GUI)	Preconditions: Fresh launch; no sites loaded. 1. Create a site with name Bragaw Hall, category Dorm, and budget 15000. 2. Add requester Alice Chen with description Leaking faucet in room 214; verify its ID is 1. 3. Edit ID 1 and click Submit; then edit ID 1 and click Approve with no review note.	1. The initial dispatch puts ID 1 InProgress with technician jmartin. 2. Reassign puts ID 1 in Assigned and clears the technician. 3. The second dispatch puts ID 1 InProgress with technician twalker.	Pass.

Author: Aanya Tomar	4. Edit ID 1; enter technician ID jmartin and click Dispatch. 5. Edit ID 1 and click Reassign. 6. Edit ID 1; enter technician ID twalker and click Dispatch. 7. Edit ID 1; choose Cancelled by requester and click Cancel Job. 8. Edit rejected ID 1; enter optional note Requester wants repair again and click Reopen.	4. Cancel Job puts ID 1 in Rejected, clears its technician, and records Cancelled by requester as its note. 5. Reopen puts ID 1 in UnderReview with no technician	

Test ID: 5 Test Name: loadModifyAndSave Requirement(s): UC0, UC2, UC3, UC4, UC5, UC6, UC8, UC10 Type: System (manual GUI) Author: Aanya Tomar	Preconditions: Fresh launch; wolfrepair_stp_input.txt exists with the exact contents above; no sites loaded. 1. Choose Load from the File menu and select wolfrepair_stp_input.txt. 2. With Bragaw Hall active, inspect the work order list and select Assigned from the state filter; click Filter. 3. Choose All in the filter and click Filter; then select Reynolds Coliseum from the site selector and click Select Site. 4. Select its ID 2 work order and click Delete Work Order. 5. Choose Save from the File menu and save to wolfrepair_stp_output.txt. 6. Open test-files/wolfrepair_stp_output.txt as text in Eclipse and compare its contents with the expected results. Close the WolfRepair application using the window's close button. If a save-file chooser appears, click Cancel. Confirm that the application closes. 7. In Eclipse, right-click WolfRepairGUI.java → Run As → Java Application. In the new application window, select File → Load Repair Sites File and open test-files/wolfrepair_stp_output.txt.	1. Bragaw Hall is initially active. Its list contains exactly IDs 1, 3, and 5 in that order; duplicate ID 1 and invalid ID 4 were skipped. Empty Site is absent. 2. Filtering Assigned shows only ID 3, Priya Nair, No hot water on 3rd floor. Choosing All restores IDs 1, 3, and 5. 3. Selecting Reynolds Coliseum displays its sole order: ID 2, UnderReview, Marcus Lee, Bleacher railing loose. 4. Deleting ID 2 leaves Reynolds Coliseum with an empty work order list. 5. The saved file has a Bragaw Hall header and only its three valid work orders (IDs 1, 3, and 5). It has no Reynolds Coliseum or Empty Site	Pass.

		header, no duplicate ID 1, and no invalid ID 4. 6. The first application closes. Reloading the saved file in a new instance makes Bragaw Hall active and again displays exactly IDs 1, 3, and 5 in ID order
